

**ELECTRONIC SUBMITTAL ([NPDES.GeneralPermits@epa.gov](mailto:NPDES.GeneralPermits@epa.gov))  
AND  
OVERNIGHT DELIVERY**

October 24, 2005

US Environmental Protection Agency  
RGP-NOI Processing  
Municipal Assistance Unit (CMU)  
1 Congress Street, Suite 1100  
Boston, MA 02114-2023

To Whom It May Concern:

On September 9, 2005, the USEPA published the NPDES Remediation General Permit ("RGP") in the Federal Register. It stated the deadline for submittal of Notice of Intents ("NOI") or individual NPDES applications for those facilities currently discharging under USEPA Permit Exclusions was October 10, 2005. On September 19, 2005, NewFields requested, in writing, a 60-day extension to the October 10, 2005 deadline. On October 6, 2005, George Papadopoulos granted an extension until October 24, 2005 via electronic mail. The electronic mail stated that in cases where the permittee was unable to submit all the required information by October 24, 2005, the application should be submitted with as much information as possible and supplemental data provided when it becomes available. Thus NewFields Princeton LLC, on behalf of Motiva Enterprises LLC, is submitting an incomplete NOI application package for the above referenced facility that will be certified by the operator, Motiva Enterprises LLC, upon its final submittal and completion.

Motiva Enterprises LLC is currently operating a Shell branded gasoline service station at 846 Concord Street in Framingham, MA. Remediation of this facility is being conducted under the Massachusetts Contingency Plan ("MCP") (310 CMR 40.0000). As part of the remediation project, a groundwater remediation system is operating at an adjacent property (Bella Costa Restaurant, 147 Cochituate Road, Framingham, MA). The remediation system is treating water from the basement sump under EPA Permit Exclusion #MA-04I-031. The receiving stream is Sucker Pond which flows to Brackett Reservoir. The Brackett Reservoir flows to the Charles River classified as Class B.

Pursuant to the NPDES RGP requirements, samples of the influent to the remediation system have been taken and analyzed by State of Massachusetts certified laboratories. The final data packages and associated quality control/quality assurance (“QA/QC”) documents are enclosed herein.

The results of the influent sampling indicate the presence of metals above the Appendix III and Appendix IV (0-5 dilution) limitations for Cadmium, Copper, Lead, Zinc and Iron. It should be noted that these metals are naturally occurring in the groundwater and are not associated with the gasoline service station remediation project. Samples of these metals will be taken in the receiving stream, upstream of the discharge point, to determine the concentrations in the surface waterbody. The results will be forwarded upon receipt.

**US Environmental Protection Agency**

**RGP-NOI Processing**

**Shell-Branded Service Station, 846 Concord Street, Framingham, MA**

**Bella Costa Restaurant, 147 Cochituate Road, Framingham, MA**

**October 24, 2005**

**Page 2 of 4**

The dilution factor of the receiving stream, Sucker Pond, was calculated at 1.0 using the USGS Stream Stats Program. Thus the permittee is proposing to take hardness samples from the receiving stream, and effluent of the remediation system, in order to calculate site-specific metal limitations. The results will be provided to your office. If the site specific metal limitations calculated are higher than the Appendix IV limitations, which were calculated using a MA statewide average hardness of 50 mg/l CaCO<sub>3</sub>, the permittee reserves the right to submit an individual NPDES application as specified in the *Response to Comments on the October 2004 Proposed Remediation General Permit ("Response to Comments")* document posted on the EPA website.

The NPDES Remediation General Permit and associated *Response to Comments* document, allow the permittee to request revisions to the permit conditions based upon site-specific conditions. The following is a list of the requested revisions for this facility.

**TEMPERATURE**

In the *Response to Comments* document, the EPA agreed that "temperature limits should only apply if the water treatment contains a heating process that can alter the temperature of the discharge and therefore impact the receiving water body"....Therefore the EPA will review each NOI and determine whether the discharge has the potential to affect the temperature sufficiently enough to require monitoring". Since the existing groundwater treatment system does not, and will not, alter the temperature of the receiving waterbody, we are requesting that the EPA not impose monitoring and sampling requirements for temperature at the above referenced location.

**PH**

In the *Response to Comments* document, the EPA recognized that "in many cases, the pH will not be altered by the operation of the water treatment system." Thus Part I.C.2. of the RGP allows permittees in Massachusetts to request the pH range be widened to within 6.0 - 9.0 standard units (SU) or another range due to naturally occurring conditions in the receiving water. Similarly, permittees may request such a change if the naturally occurring source water is unaltered by the permittee's operation. The current pH limitation for Class B waters in Massachusetts is 6.5 - 8.3 SU. Since the pH of the groundwater will be unaltered by the permittee's operation, we are requesting the pH range be widened to 6.0 - 9.0 SU for this facility.

**EXEMPTION FROM INITIAL START-UP SAMPLING REQUIREMENTS**

In the *Response to Comments* document, the EPA agreed that "treatment systems operating under the EPA Permit Exclusion that have been discharging for several years, unless the system has been down for 45 days or more as of the date that the final RGP becomes effective, can be exempted from the initial start-up sampling requirements." Since the referenced remediation system has been discharging under an EPA Permit Exclusion, and has not been down for greater than 45 days as of the date the RGP became effective (September 9, 2005), we are requesting exemption from the initial start-up sampling requirements listed in the RGP.

**COMPLIANCE PERIOD**

In the *Response to Comments* document, the EPA stated they "will make every effort to provide existing dischargers with sufficient transition time to make any necessary changes to the treatment system in order to comply with the RGP." Based on the influent sampling results enclosed herein, the EPA may impose sampling for parameters not previously required (e.g. metals), or lower limitations on parameters currently required. In order to avoid ceasing operation of the groundwater remediation system due to the risk of Notice of Violations (NOVs) and monetary penalties, the EPA should permit a compliance period of 30 months. During this compliance period the EPA should waive the limitations on those parameters not previously required and maintain the existing limit on those parameters currently required to be sampled on a monthly basis under the EPA Permit Exclusion for a period of 30 months from the effective date of the permit. Regulation 40 CFR Part 122.47 allows a maximum compliance period of three years.

**US Environmental Protection Agency**

**RGP-NOI Processing**

**Shell-Branded Service Station, 846 Concord Street, Framingham, MA**

**Bella Costa Restaurant, 147 Cochituate Road, Framingham, MA**

**October 24, 2005**

**Page 3 of 4**

A compliance period of 30 months is requested for the following reasons:

- The permittee needs to collect additional influent, midpoint and effluent data from the existing remediation system over a period of 12 months in order to determine if a system modification is warranted; one year is needed to account for the temperature changes and groundwater table fluctuations.
- If the sampling results indicate a system modification is warranted, an additional 18 months is needed in order for the following activities to be performed: redesign of the treatment system by a professional engineer, research of various treatment options, obtain local permits, obtain access agreements, obtain capital dollars for equipment purchase, purchase equipment, install equipment, power drop modifications, existing treatment shed expansions and pilot testing the new treatment equipment.

**APPROVAL OF ALTERNATE METHODOLOGIES**

**HEXAVALENT CHROMIUM**

In the *Response to Comments* document, the EPA agreed that "Method 7196A is a possible substitute" for the hexavalent chromium methods 218.6 and 1636. To use this method, permittees were instructed to request it individually as an alternative test procedure. The permittee was unable to locate any labs able to run hexavalent chromium by method 218.6 or 1636 since they are considered outdated methods. Method 7196A is currently utilized. The required ML of 10 ug/l is achievable by this method. Thus we are requesting the EPA approve method 7196A for hexavalent chromium for this facility.

**TOTAL CYANIDE**

Appendix VI of the NPDES RGP specifies the test method for Total Cyanide is 335.4. This method has not been approved for use to date, therefore method 335.3 was utilized.

**APPROVAL OF ALTERNATE MLS**

**TOTAL ZINC**

The ML listed for Total Zinc using an ICP test method is 10 ug/l. A survey of laboratories showed that the lowest ML obtainable was 20 ug/l. Thus we are requesting the USEPA accept this alternate ML. The laboratory QA/QC data deliverable package has been enclosed for your convenience.

**TOTAL COPPER**

The ML listed for Total Copper using an ICP test method is 5 ug/l. A survey of laboratories showed that the lowest ML obtainable was 20-25 ug/l. Thus we are requesting the USEPA accept this alternate ML. The laboratory QA/QC data deliverable package has been enclosed for your convenience.

**ETHYLENE DIBROMIDE**

The ML listed for Ethylene Dibromide using method 504.1 is 0.01 ug/l. A survey of laboratories showed that the lowest ML obtainable was 0.015 ug/l. Thus we are requesting the USEPA accept this alternate ML. The laboratory QA/QC data deliverable package has been enclosed for your convenience.

If you have any questions, or require any additional information, I may be contacted at (732) 224-7066 extension 17.

Respectfully,

NewFields Princeton LLC

# **NOI FORM**

## **I. Suggested Notice of Intent (NOI) Form**

In order to be covered by the remediation general permit (RGP), applicants must submit a written Notice of Intent (NOI) to EPA Region I and the appropriate state agency. **All parties meeting the definition of “operator” must fill out, sign, and submit separate NOIs.**

The “operator” is defined in Part I.B.1. as the person<sup>1</sup> who has operational control over plans and specifications, or the person who has day-to-day supervision and control of activities occurring at the site. For purposes of this permit, the operator is either:

- i. The owner<sup>2</sup> (e.g., title holder, developer, or easement holder of the property) if that entity is performing all work related to complying with this permit; **or**
- ii. Both the owner<sup>2</sup> (e.g., title holder, developer, or easement holder of the property) and contractor(s) if a contractor(s) has been hired to perform work related to complying with this permit.

This means that each party meeting the definition of operator should apply for coverage under the RGP if it has operational control over either the project site plans and specifications, including the ability to make modifications to those plans and specifications (e.g., the property owner), or has day-to-day operational control of those activities at a project which are necessary to ensure compliance with permit conditions (e.g., the contractor). Where a party’s activity is part of a larger common plan (e.g., for the development or sale of the property), that party is only responsible for applying for the portions of the project for which it meets the definition of “operator.” In many instances, there may be more than one party at a site performing tasks related to “operational control” and hence, more than one operator must submit an NOI. Depending on the site and the relationship between the parties (e.g., owner, contractor, etc.), there could be either a single party acting as site operator and consequently responsible for obtaining permit coverage, or there could be two or more operators all needing permit coverage.

The following are three general “operator” scenarios (variations on any of these three are possible, especially as the number of owners and contractors increases):

- “Owner” as “Operator” - *sole permittee*. The property owner designs the structures and control systems for the site, develops and implements the BMPP, and serves as general contractor (or has an on-site representative with full authority to direct day-to-day operations). Under the definition of operator, in this case, the “Owner” would be considered the “operator” and therefore the only party that needs permit coverage. Everyone else working on the site may be considered subcontractors and do not need to apply for permit coverage.

---

<sup>1</sup> Defined in 40 CFR 122.2.

<sup>2</sup>For purposes of this permit, the “owner” of a property is the person, as defined by 40 CFR 122.2, holding the title, deed, or legal document to the regulated property, facility, or activity, including a party working under an easement on the property.

- ▶ “*Contractor*” as “*Operator*” - *sole permittee*. The property owner hires a company (e.g., a contractor) to design the project and oversee all aspects, including preparation and implementation of the BMPP and compliance with the permit (e.g., a “turnkey” project). Here, the contractor would likely be the only party needing a permit. It is under this scenario that an individual having a personal residence built for his own use (e.g., not those to be sold for profit or used as rental property) would not be considered an operator. Similarly, EPA expects that property owners hiring a contractor or consultant to perform groundwater remediation work (e.g., due to a leaking fuel oil tank) would come under this type of scenario. EPA believes that the contractor, being a professional in the industry, should be the responsible entity rather than the individual. The contractor is better equipped to meet the requirements of both applying for permit coverage and developing and properly implementing the plans needed to comply with the permit. However, property owners would also meet the definition of “operator” and require permit coverage in instances where they perform any of the required tasks on their personal properties.
- ▶ “*Owner*” and “*Contractor*” as “*Operators*” - *co-permittees*. The owner retains control over any changes to site plans, BMPPs, or wastewater conveyance or control designs, but the contractor is responsible for conducting and overseeing the actual activities (e.g., excavation, installation and operation of treatment train, etc.) and daily implementation of BMPP and other permit conditions. In this case, **both** parties need to apply for coverage.

Generally, a person would not be considered an “operator,” and subsequently would not need permit coverage, if: 1) that person is a subcontractor hired by, and under the supervision of, the owner or a general contractor (e.g., if the contractor directs the subcontractor’s activities on-site, it is probably not an operator); or 2) the person’s activities would otherwise result in the need for coverage under the RGP but another operator has legally assumed responsibility for the impacts of project activities.

**A. Instructions for the Suggested Notice of Intent (NOI)** - At a minimum, the Notice of Intent must include the following for each individual facility or site. Additional information may be attached as needed.

#### **1. General facility/site information.**

- a) Provide the **facility/site** name, mailing address, and telephone and fax numbers. Provide the facility SIC code(s). Provide the site location, including longitude and latitude.
- b) Provide the property **owner’s** name, address, email address, telephone and fax numbers, if different from the site information. Indicate whether the owner is a Federal, State, Tribal, private, or other entity.
- c) Provide the site **operator’s** (e.g., contractor’s) name, mailing address, telephone and fax numbers, and email address if different from the owner’s information.
- d) For the site for which the application is being submitted, indicate whether:
  - 1) a prior NPDES permit exclusion has been granted for the discharge (if so, provide the tracking number of the exclusion letter);

- 2) a prior NPDES application (Form 1 & 2C) has ever been filed for the discharge (if so, provide the tracking number and date that the application was submitted to EPA);
  - 3) the discharge is a “new discharge” as defined by 40 CFR 122.2; and
  - 4) for sites in Massachusetts, is the discharge covered under the MA Contingency Plan (MCP) and exempt from state permitting.
- e) Indicate whether there is any ongoing state permitting, licensing, or other action regarding the facility or site which is generating the discharge. If “yes,” provide any site identification number assigned by the state of NH or MA, any permit or license number assigned, and the state agency contact information (e.g. name, location, telephone no.).
  - f) Indicate whether or not the facility is covered by other EPA permits including: the multi-sector storm water general permit; the Phase I or II Construction Storm Water General Permit; an individual NPDES permit; or, any other water quality-related individual or general permit. If so, provide permit tracking number(s).

## **2. Discharge information.**

- a) Describe the discharge activities to be covered by the permit. Attach additional sheets as needed.
- b) Provide the following information about each discharge:
  - 1) the number of discharge points;
  - 2) the **maximum and average flow rate** of the discharge in cubic feet per second. For the average flow magnitude, include the units and appropriate notation if this value is a calculated design value or estimate if technical/design information is not available;
  - 3) the latitude and longitude of each discharge with an accuracy of 100 feet (see EPA’s siting tool at: [http://www.epa.gov/tri/report/siting\\_tool/](http://www.epa.gov/tri/report/siting_tool/));
  - 4) the total volume of potential discharge (gal), only if hydrostatic testing;
  - 5) indication whether the discharge(s) is intermittent or seasonal and if ongoing.
- c) Provide the expected start and end dates of discharge (month/day/year)
- d) Attach a line drawing or flow schematic showing water flow through the facility including:
  - 1) sources of intake water;
  - 2) contributing flow from the operation;
  - 3) treatment units; and
  - 4) discharge points and receiving waters(s).

**3. Contaminant information.** In order to complete section I.3. of the NOI, the applicant will need to take a minimum of one sample of the untreated water and have it analyzed for **all** of the parameters listed in Appendix III. The applicant may use historical data as a substitute for the new sample if the data was collected no more than 2 years prior to the effective date of the permit and if collected pursuant to: i. Massachusetts’ regulations 310 CMR 40.0000, the Massachusetts Contingency Plan (“Chapter 21E”); ii. New Hampshire’s Title 50 RSA 485-A: Water Pollution and Waste Disposal or Title 50 RSA 485-C: Groundwater Protection Act; or iii. an EPA permit exclusion letter issued pursuant to 40 CFR 122.3, and was analyzed with the test methods required by this permit. Otherwise, a new sample shall be taken and analyzed.

- a) Based on the analysis of the sample(s) of the untreated influent, the applicant must indicate which of the sub-categories (listed in Table V of Part I.C of the permit) that the potential discharge falls within.
- b) Based on the analysis of the untreated influent, the applicant must indicate whether each listed chemical is **believed present** or **believed absent** in the potential discharge.

Based on the required sampling and analysis, the applicant must fill in the table, or provide a narrative description, with the following additional information for each chemical that is **believed present**:

- 1) the number of samples taken (minimum of one sample);
- 2) the type of sample (e.g. grab, composite, etc.);
- 3) the analytical method used, including the method number;
- 4) the minimum level (ML) of the method used (based on Appendix VI);
- 5) the maximum daily amount (concentration, ug/l, and mass, kg) of each pollutant, based on the sampling data (see Appendix VIII instructions for sample mass calculations); and
- 6) the average daily amount (concentration and mass) of each pollutant, based on the sampling data.

If the results of the required sampling indicate that pollutants exist in addition to those listed in Appendix III of the RGP of the permit, the applicant must also describe those contaminants on the NOI in boxes in section I.3.b) on the line marked “Other,” or using additional sheets as needed. Subsequently, EPA will decide if the RGP can apply or if an individual permit is necessary.

c) Determination of Reasonable Potential and Allowable Dilution for Discharges of Metals:  
If any **metals** are believed present in the potential discharge to freshwater<sup>3</sup>, the applicant must follow the 2 step calculation procedures described below to determine the reasonable potential for exceedance of water quality standards and dilution factor for each metal.

#### ***Step 1: Initial Evaluation***

- 1) The applicant must evaluate all metals believed present in the discharge subject to this permit, including “naturally occurring” metals such as dissolved and/or total Iron.  
Applicants must enter the highest detected concentration of the metal at zero dilution in the “Maximum value” column of the NOI.
- 2) Based on the maximum concentration of each metal, the applicant must perform an initial evaluation assuming zero dilution in the receiving water. The applicant must compare the metals concentrations in the untreated (intake) waters to the limits contained in Appendix III.
  - i. If potential discharges (untreated influent) with metals contain concentrations above the concentration limits listed in Appendix III , applicant must proceed to step 2.

---

<sup>3</sup>Dilution factors may be available for discharges to saline waters but only with approval of the flow modeling information from the State prior to the submission of the NOI.

ii. If potential discharges (untreated influent) with metals contain concentrations below the concentrations listed in Appendix III, the applicant may skip step 2 and those metals will **not** be subject to permit limitations or monitoring requirements.

***Step 2: Calculation of Dilution Factor***

**1) For applicants in NH:** If a metal concentration in a potential discharge (untreated influent) to **freshwater<sup>3</sup>** exceeds the limits in Appendix III with zero dilution, the applicant shall evaluate the potential concentration considering a dilution factor (DF) using the formula below. **For sites in New Hampshire, the applicant must contact NH DES to determine the 7Q10 and dilution factor.**

$$DF = [(Qd + Qs)/Qd] \times 0.9$$

**Where:**

<b>DF</b>	= <b>Dilution Factor</b>
<b>Qd</b>	= <b>Maximum flow rate of the discharge in cubic feet per second (cfs) (1.0 gpm = .00223 cfs)</b>
<b>Qs</b>	= <b>Receiving water 7Q10 flow, in cfs, where,</b>
<b>7Q10</b>	= <b>The annual minimum flow for 7 consecutive days with a recurrence interval of 10 years</b>
<b>0.9</b>	= <b>Allowance for reserving 10% of the assets in the receiving stream as per Chapter ENV-Ws 1700, Surface Water Quality Regulations</b>

- i. Using the DF calculated from the formula above, the applicant must refer to the corresponding DF range column in Appendix IV. The applicant then compares the maximum concentration of the metal entered on the NOI to the corresponding total recoverable metals limits listed in Appendix IV.
  1. If a metal concentration in the potential discharge (untreated influent) is less than the corresponding limit in Appendix IV, the metal will **not** be subject to permit limitations or monitoring requirements.
  2. If a metal concentration in the potential discharge (untreated influent) is equal to or exceeds the corresponding limit in Appendix IV, the applicant must reduce it in the effluent to a concentration below the applicable total recoverable metals limit in Appendix IV prior to discharge.
- ii. In either case, the applicant must submit the results of this calculation as part of the NOI. EPA and NH DES will review the proposed effluent limitations for each metal and approve or disapprove the limits in the notification of coverage letter to the applicant.

**2) For applicants in MA:** If a metal concentration in a potential discharge (untreated influent) to freshwater<sup>3</sup> exceeds the limits in Appendix III with zero dilution, the applicant must evaluate the potential concentration considering a dilution factor (DF) using the formula below.

$$DF = (Qd + Qs)/Qd$$

**Where:**

<b>DF</b>	= Dilution Factor
<b>Qd</b>	= Maximum flow rate of the discharge in cubic feet per second (cfs) (1.0 gpm = .00223 cfs)
<b>Qs</b>	= Receiving water 7Q10 flow (cfs) where,
<b>7Q10</b>	= The minimum flow (cfs) for 7 consecutive days with a recurrence interval of 10 years

- i. The applicant may estimate the 7Q10 for a receiving water by using available information such as nearby USGS stream gauging stations directly or by application of certain "flow factors," using historic streamflow publication information, calculations based on drainage area, information from state water quality offices, or other means. In many cases the states of MA have calculated 7Q10 information using "flow factors" for a number of streams in the state. The source of the low flow value(s) used by the applicant must be included on NOI application form. Flow data can also be obtained from web applications such as STREAMSTATS located at: <http://ma.water.usgs.gov/streamstats/>.
- ii. Using the DF calculated from the formula above, the applicant must refer to the corresponding DF range column in Appendix IV. The applicant then compares the maximum concentration of each metal entered on the NOI to the corresponding total recoverable metals limit listed in Appendix IV.
  1. If a metal concentration in the potential discharge (untreated influent) is less than the corresponding limit in Appendix IV, the metal will **not** be subject to permit limitations or monitoring requirements.
  2. If a metal concentration in a potential discharge (untreated influent) is equal to or exceeds the corresponding limit in Appendix IV, the applicant must reduce it in the effluent to a concentration below the applicable total recoverable metals limit in Appendix IV prior to discharge.
- iii. The applicant must submit the results of this calculation as part of the NOI. EPA (and MA DEP where the discharge not covered by 310 CMR 40.0000) will review the proposed effluent limitations for each metal and approve or disapprove the limits in the notification of coverage letter to the applicant.

#### **4. Treatment system information.**

- a) Describe the treatment train for each discharge and attach a schematic of the proposed or existing treatment system.
- b) Identify each major treatment unit (e.g. frac tanks, filters, air stripper, liquid phase/vapor phase activated carbon, oil/water separators, etc.) by checking all that apply and describing any additional equipment not listed. Provide a written description of how the system train will be set up. Attach additional sheets as needed.

- c) Provide the proposed **average** and **maximum flow** rates (in gallons per minute, gpm) for the discharge and the **design flow** rates (in gpm) of the treatment system. Clearly identify the component of the treatment with the most limited flow, i.e., the part of the treatment train that establishes the **design flow**.
- d) Describe any chemical additives being used, or planned to be used, and attach MSDS sheets for each. EPA may request further information regarding the chemical composition of the additive, potential toxic effects, or other information to insure that approval of the use of the additive will not cause or contribute to a violation of State water quality standards. Approval of coverage under the RGP will constitute approval of the use of the chemical additive(s). If coverage of the discharge under the RGP has already been granted and the use of a chemical additive becomes necessary, the permittee must submit a Notice of Change (NOC).

#### **5. Receiving surface water(s) information.**

- a) Identify the discharge pathway by checking whether it is discharged: directly to the receiving water, within the facility (e.g., through a sewer drain), to a storm drain, to a river or brook, to a wetland, or other receiving body.
- b) Provide a narrative description of the discharge pathway, including the name(s) of the receiving waters into which discharge will occur.
- c) Provide a detailed map(s) indicating the location of the site and outfall to the receiving water:
  - 1) For multiple discharges, the discharges should be numbered sequentially.
  - 2) In the case of indirect dischargers (to municipal storm sewer, etc) the map(s) must be sufficient to indicate the location of the discharge to the indirect conveyance and the discharge to the state classified surface water. The map should also include the location and distance to the nearest sanitary sewer as well as the locus of nearby sensitive receptors (based on USGS topographical mapping), such as surface waters, drinking water supplies, and wetland areas.
- d) Provide the state water quality classification of the receiving water and the basin;
- e) Specify the reported seven day-ten year low flow (7Q10) of the receiving water (see Section I.A.3)c. above). In New Hampshire, the 7Q10 must be provided by to the applicant by the New Hampshire Department of Environmental Services.
- f) Indicate whether the receiving water is a listed 303(d) water quality impaired or limited water and if so, for which pollutants (see Section VII.H. of the Fact Sheet for additional information). Also, indicate if there is a TMDL for any of the listed pollutants. For MA, the list of waters can be found at: <http://www.mass.gov/dep/brp/wm/tmdls.htm> and for NH: <http://www.epa.gov/ne/eco/tmdl/impaird2o.html>. For more information, contact the states at: New Hampshire Department of Environmental Services, Watershed Management Bureau at 603-271-3503 or the Massachusetts Department of Environmental Protection at 508-767-2796 or 508-767-2873;

**6. Consultation with Federal Services** - As required in Part I.A.4 and Appendix VII the operator of a site/facility must ensure that the potential discharge will not affect adversely endangered species, designated critical habitat, or essential fish habitat, or national historic places that are in proximity to the potential discharge. If the potential discharge is to certain water bodies, the applicant must also submit a formal certification with the NOI that indicates the consultation, with the U.S. Fish and Wildlife Service and National Marine Fisheries Service (the Services), resulted in either a no jeopardy opinion or a written concurrence on a finding that the discharges are not likely to adversely affect any endangered species or critical habitat. Facilities should begin the

consultation as early in the process as possible.

- a) Indicate whether any listed threatened or endangered species, designated critical habitat, or essential fish habitat, are in proximity to the discharge to be covered by this permit and whether any consultation with the Services is complete or underway.
- b) Indicate whether or not there are any historic properties listed or eligible for listing on the National Register of Historic Places located on the facility or site or in proximity to the discharge (see <http://www.cr.nps.gov/nr/research/nris.htm>), and whether any state or tribal historic preservation officer (SHPO or THPO) was consulted in such a determination (for Massachusetts sites only).

**7. Supplemental information.** Applicants should provide any supplemental information needed to meet the requirements of the permit, including, any analytical data used to support the application, and any certification(s) required.

**8. Signature Requirements** - The Notice of Intent must be signed by the operator in accordance with the signatory requirements of 40 CFR Section 122.22, including the following certification:

*I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, I certify that the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I certify that I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.*

**B. Suggested Form for Notice of Intent (NOI) for the Remediation General Permit**

1. General site information. Please provide the following information about the site:

a) Name of facility/site: Bella Costa Restaurant	Facility/site address:		
Location of facility/site: longitude: 71° 24' 24" latitude: 42° 18' 04"	Facility SIC code (s): 5812 - Restaurant	Street: 147 Cochituate Road	
b) Name of facility/site owner: Andrew Karpouzis	Town: Framingham	State: MA	Zip: 01701
Email address of owner: N/A	County: Middlesex		
Telephone no. of facility/site owner: N/A	Owner is (check one) 1. Federal <input type="checkbox"/> 2. State/Tribal <input type="checkbox"/> 3. Private <input checked="" type="checkbox"/> 4. Other <input type="checkbox"/> if so, describe:  Address of owner (if different from site):  Street: 147 Cochituate Road		
Fax no. of facility/site owner: N/A	State: MA	Zip: 01701	County: Middlesex
c.) Legal name of operator: Motiva Enterprises LLC	Operator telephone no.: 845-462-5225		
	Operator fax no.: 845-462-4999	Operator email: David.Weeks@Shell.com	
Operator contact name and title: David Weeks, Senior Environmental Engineer			
Address of operator (if different from owner): David Weeks, Senior Environmental Engineer	Street: 1830 South Road, Unit 24, PMB 301		
Town: Wappingers Falls	State: NY	Zip: 12590	County: Dutchess
d) Check "yes" or "no" for the following:			
1. Has a prior NPDES permit exclusion been granted for the discharge? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> , if "yes," number: MA-041-031			
2. Has a prior NPDES application (Form 1 & 2C) ever been filed for the discharge? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> , if "yes," date and tracking #:			
3. Is the discharge a "new discharge" as defined by 40 CFR 122.2? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>			
4. For sites in Massachusetts, is the discharge covered under the MA Contingency Plan (MCP) and exempt from state permitting? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>			

<p>e) Is site/facility subject to any State permitting or other action which is causing the generation of discharge? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/></p> <p>If "yes," please list:</p> <ol style="list-style-type: none"> <li>1. site identification # assigned by the state of NH or MA:</li> <li>2. permit or license # assigned:</li> <li>3. state agency contact information: name, location, and telephone number:</li> </ol>		<p>f) Is the site/facility covered by any other EP A permit, including:</p> <ol style="list-style-type: none"> <li>1. multi-sector storm water general permit? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>, if Y, number: _____</li> <li>2. phase I or II construction storm water general permit? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>, if Y, number: _____</li> <li>3. individual NPDES permit? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>, if Y, number: _____</li> <li>4. any other water quality related permit? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>, if Y, number: _____</li> </ol>				
<p><b>2. Discharge information.</b> Please provide information about the discharge, (attaching additional sheets as needed) including:</p> <p>a) Describe the discharge activities for which the owner/applicant is seeking coverage:</p> <p>Groundwater treatment at restaurant associated with remediation of Shell Service Station located at 846 Concord Street, Framingham, MA.</p>						
<p>b) Provide the following information about each discharge:</p> <table border="1"> <tr> <td>1) Number of discharge points:</td> <td>1</td> <td>2) What is the <b>maximum</b> and <b>average flow rate</b> of discharge (in cubic feet per second, W/s)? Max. flow <u>0.03345 ft<sup>3</sup>/sec</u> Average flow <u>0.0156 ft<sup>3</sup>/sec</u> Is maximum flow a <b>design value?</b> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> For average flow, include the units and appropriate notation if this value is a design value or estimate if not available. Average flow <u>0.0156 ft<sup>3</sup>/sec</u> (based on historical operations)</td> </tr> </table>	1) Number of discharge points:	1	2) What is the <b>maximum</b> and <b>average flow rate</b> of discharge (in cubic feet per second, W/s)? Average flow <u>0.0156 ft<sup>3</sup>/sec</u> (based on historical operations)				
<p>4) If hydrostatic testing, total volume of the discharge (gals):</p> <p>N/A</p>		<p>5) Is the discharge intermittent <input checked="" type="checkbox"/> Or seasonal <input type="checkbox"/> ?</p> <p>Is discharge ongoing Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>, ?</p>				
<p>c) Expected dates of discharge (mm/dd/yy): start <u>01/19/04</u> end <u>unknown</u></p>						
<p>d) Please attach a line drawing or flow schematic showing water flow through the facility including: See attached figures.</p>						
<p>1. sources of intake water, 2. contributing flow from the operation, 3. treatment units, and 4. discharge points and receiving waters(s).</p>						

3. Contaminant information. In order to complete this section, the applicant will need to take a minimum of one sample of the untreated water and have it analyzed for all of the parameters listed in Appendix III. Historical data, (i.e., data taken no more than 2 years prior to the effective date of the permit) may be used if obtained pursuant to: i. Massachusetts' regulations 310 CMR 40 0000, the Massachusetts Contingency Plan ("Chapter 2IE"); ii. New Hampshire's Title 50 RSA 485-A; Water Pollution and Waste Disposal or Title 50 RSA 485-C; Groundwater Protection Act; or iii. an EPA permit exclusion letter issued pursuant to 40 CFR 122.3, provided the data was analyzed with test methods that meet the requirements of this permit. Otherwise, a new sample shall be taken and analyzed.

a) Based on the analysis of the sample(s) of the untreated influent, the applicant must check the box of the sub-categories that the potential discharge falls within.

Gasoline Only <input checked="" type="checkbox"/>	VOC Only <input type="checkbox"/>	Primarily Metals <input type="checkbox"/>	Urban Fill Sites <input type="checkbox"/>	Contaminated Sumps <input type="checkbox"/>	Mixed Contaminants <input type="checkbox"/>	Aquifer Testing <input type="checkbox"/>
Fuel Oils (and <input type="checkbox"/> Other Oils) only	VOC with Other Contaminants <input type="checkbox"/>	Petroleum with Other Contaminants <input type="checkbox"/>	Listed Contaminated Sites <input type="checkbox"/>	Contaminated Dredge Condensates <input type="checkbox"/>	Hydrostatic Testing of Pipelines/Tanks <input type="checkbox"/>	Well Development or Rehabilitation <input type="checkbox"/>

b) Based on the analysis of the untreated influent, the applicant must indicate whether each listed chemical is believed present or believed absent in the potential discharge. Attach additional sheets as needed.

PARAMETER	Believe Absent	Believe Present	#of Samples (1 min-imum)	Type of Sample (e.g., grab)	Analytical Method Used (method #)	Minimum Level (ML) of Test Method (ug/l)	Maximum daily value	Avg. daily value

c. For discharges where **metals** are believed present, please fill out the following:

Step 1: Do any of the metals in the influent have a reasonable potential to exceed the effluent limits in Appendix III (i.e., the limits set at zero to five dilutions)? Y <input checked="" type="checkbox"/> N <input type="checkbox"/>	If yes, which metals? _____ Cd, Cu, Pb, Zn, Fe _____.
Step 2: For any metals which have <b>reasonable potential</b> to exceed the <b>Appendix III</b> limits, calculate the <b>dilution factor (DF)</b> using the formula in Part I.A.3.c) (step 2) of the NOI instructions or as determined by the State prior to the submission of this NOI. What is the dilution factor for applicable metals?	Look up the limit calculated at the corresponding dilution factor in <b>Appendix IV</b> . Do any of the metals in the <b>influent</b> have the potential to exceed the corresponding <b>effluent</b> limits in <b>Appendix IV</b> (i.e., is the influent concentration above the limit set at the calculated dilution factor)?
Metals: Cd, Cu, Pb, Zn, Fe	Y <input checked="" type="checkbox"/> N <input type="checkbox"/> If "Yes," list which metals: _____ Cd, Cu, Pb, Zn, Fe _____.
DF: _____ 1.00 _____	

**4. Treatment system information.** Please describe the treatment system using separate sheets as necessary, including:

a) A description of the treatment system, including a schematic of the proposed or existing treatment system: Groundwater is extracted from a recovery well and treated by two bag filters and two granular activated carbon units. See Figure 1.							
b) Identify each applicable treatment unit (check all that apply):	Frac. tank <input type="checkbox"/>	Air stripper <input type="checkbox"/>	Oil/water separator <input type="checkbox"/>	Equalization tanks <input type="checkbox"/>	Bag filter <input checked="" type="checkbox"/>	GAC filter <input checked="" type="checkbox"/>	
	Chlorination <input type="checkbox"/>	Dechlorination <input type="checkbox"/>	Other (please describe):				
c) Proposed average and maximum flow rates (gallons per minute) for the discharge and the design flow rate(s) (gallons per minute) of the treatment system:							
Average flow rate of discharge <u>7 GPM</u>	Maximum flow rate of treatment system <u>15 GPM</u>	Design flow rate of treatment system <u>15 GPM</u>					
d) A description of chemical additives being used or planned to be used (attach MSDS sheets): Not Applicable							
<b>5. Receiving surface water(s).</b> Please provide information about the receiving water (s) using separate sheets as necessary, including:							
a) Identify the discharge pathway:	Direct <input type="checkbox"/>	Within facility <input type="checkbox"/>	Storm drain <input checked="" type="checkbox"/>	River/brook <input type="checkbox"/>	Wetlands <input type="checkbox"/>	Other (describe):	
b) Provide a narrative description of the discharge pathway, including the name(s) of the receiving waters: Discharge to Town of Framingham storm sewer conveyance system to Sucker Pond to Sudbury River to Brackett Reservoir (aka Reservoir No. One) to Charles River (Class B), Concord River Basin.							
c) Attach a detailed map(s) indicating the site location and location of the outfall to the receiving water:							
1. For multiple discharges, number the discharges sequentially. 2. For indirect dischargers, indicate the location of the discharge to the indirect conveyance and the discharge to surface water The map should also include the location and distance to the nearest sanitary sewer as well as the locus of nearby sensitive receptors (based on USGS topographical mapping), such as surface waters, drinking water supplies, and wetland areas. See Figure 2							
d) Provide the state water quality classification of the receiving water <u>Class B (Freshwater)</u> .							
e) Provide the reported or calculated seven day-ten year low flow (7Q10) of the receiving water <u>0.00</u> cfs Please attach any calculation sheets used to support stream flow and dilution calculations.							
f) Is the receiving water a listed 303(d) water quality impaired or limited water? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, for which pollutant(s)? Could not be determined, see attached.							
Is there a TMDL? Yes <input type="checkbox"/> No <input type="checkbox"/> If yes, for which pollutant(s)?							

**6. Results of Consultation with Federal Services:** Please provide the following information according to requirements of Part I.B.4 and Appendices II and VII.

- a) Are any listed threatened or endangered species, or designated critical habitat, in proximity to the discharge? Yes  No   
Has any consultation with the federal services been completed? Yes  No  or is consultation underway? Yes  No

What were the results of the consultation with the U.S. Fish and Wildlife Service and/or National Marine Fisheries Service (check one): Not applicable  
a "no jeopardy" opinion?  or written concurrence  on a finding that the discharges are not likely to adversely affect any endangered species or critical habitat?

- b) Are any historic properties listed or eligible for listing on the National Register of Historic Places located on the facility or site or in proximity to the discharge?  
Yes  No  Have any state or tribal historic preservation officer been consulted in this determination (Massachusetts only)? Yes  No

**7. Supplemental information:**

Please provide any supplemental information. Attach any analytical data used to support the application. Attach any certification(s) required by the general permit.

See cover letter.

**8. Signature Requirements:** The Notice of Intent must be signed by the operator in accordance with the signatory requirements of 40 CFR Section 122.22, including the following certification:

*I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, I certify that the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I certify that I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.*

Facility/Site Name:	Bella Costa Restaurant, 147 Cochituate Road, Framingham, MA
Operator signature:	
Title:	David Weeks, Senior Environmental Engineer
Date:	

**B. Submission of NOI to EPA** - All operators applying for coverage under this General Permit must submit a written Notice of Intent (NOI) to EPA. Signed and completed NOI forms and attachments must be submitted to EPA-NE at:

US Environmental Protection Agency  
RGP-NOC Processing  
Municipal Assistance Unit (CMU),  
1 Congress Street, Suite 1100  
Boston, MA 02114-2023

or electronically mailed to [NPDES.Generalpermits@epa.gov](mailto:NPDES.Generalpermits@epa.gov),  
or faxed to the EPA Office at 617-918-0505.

If filling out the suggested NOI form electronically on EPA's website, the signature page must be signed and faxed or mailed to EPA at the phone number or address listed in Section I.B. below.

**1. Filing with the states** - A copy of any NOI form filed with EPA-NE must also be filed with state agencies. The state agency may elect to develop a state specific form or other information requirements.

a) **Discharges in Massachusetts** - In addition to the NOI, permit applicants must submit copies of the State Application Form BRPWM 12, Request for General Permit coverage for the RGP. The application form and the Transmittal Form for Permit Application and Payment, may be obtained from the Massachusetts Department of Environmental Protection (MA DEP) website at [www.state.ma.us/dep](http://www.state.ma.us/dep). Municipalities are fee-exempt, but should send a copy of the transmittal form to that address for project tracking purposes. All applicants should keep a copy of the transmittal form and a copy of the application package for their records.

1) A copy of the NOI, the transmittal form, a copy of the check, and Form BRPWM 12 should be sent to:

Massachusetts Department of Environmental Protection  
Division of Watershed Management  
627 Main Street, 2<sup>nd</sup> floor  
Worcester, MA 01608

2) A copy of the transmittal form and the appropriate fee should be sent to:

Massachusetts Department of Environmental Protection  
P.O. Box 4062  
Boston, MA 02111

Please note: Applicants for discharges in Massachusetts should note that under 310 CMR 40.000, *as a matter of state law*, the general permit only applies to discharges that are **not** subject to the Massachusetts Contingency Plan (MCP) and 310 CMR 40.000. Therefore, discharges subject to the MCP are **not** required to fill out and submit the State Application Form BRPWM 12 or pay the state fees. However, they must submit a NOI to EPA.

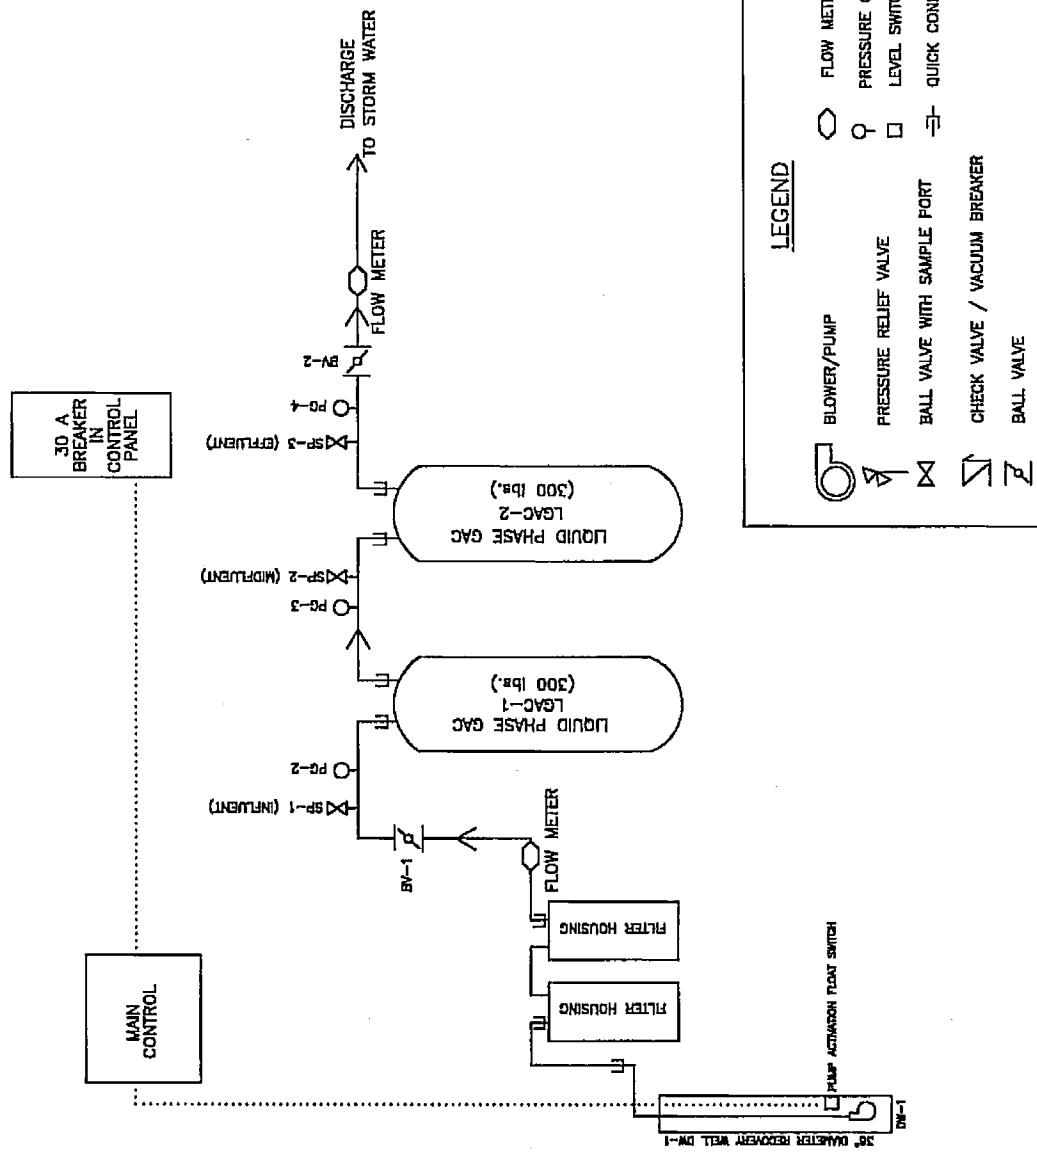

b) Discharges in New Hampshire - applicants must provide a copy of the Notice of Intent to:

New Hampshire Department of Environmental Services  
Water Division  
Wastewater Engineering Bureau  
P.O. Box 95  
Concord, New Hampshire 03302-0095.

2. Filing with Municipalities - A copy of the NOI must be submitted to the municipality in which the proposed discharge would be located.

## Appendix 2

### Waterbody Segments and Integrated List Categories by Major Watershed

NAME	SEGMENT ID	DESCRIPTION	ASSESS DATE	CATEGORY
Sesuit Creek (9661300)	MA96-13_2002	From Route 6A to mouth at Cape Cod Bay, Dennis.	Nov-01	5
Shallow Pond (96285)	MA96285_2002	Barnstable	Feb-98	3
Shawme Lake Lower (96288)	MA96288_2002	Sandwich	Feb-02	3
Sheep Pond (96289)	MA96289_2002	Brewster	Jun-02	5
Shoestring Bay (96905)	MA96-08_2002	Quinaquisset Avenue to Popponesset Bay (line from Ryefield Point, Barnstable to Punkhorn Point, Mashpee, including Gooseberry Island), Barnstable/Mashpee.	May-03	5
Shubael Pond (96293)	MA96293_2002	Barnstable	Dec-93	3
Snake Pond (96302)	MA96302_2002	Sandwich	Feb-02	5
Stage Harbor (96907)	MA96-11_2002	From the outlet of Mill Pond (including Mitchell River) to the confluence with Nantucket Sound at a line from the southernmost point of Harding Beach southeast to the Harding Beach Point, Chatham.	May-03	5
Swan Pond River (9662175)	MA96-14_2002	Outlet of Swan Pond to confluence with Nantucket Sound, Dennis.	Nov-01	5
Taylors Pond (96311)	MA96-42_2002	Chatham	May-03	5
Upper Mill Pond (96324)	MA96324_2002	Brewster	Feb-02	5
Upper Shawme Lake (96326)	MA96326_2002	Sandwich	Feb-02	3
Village Pond (96329)	MA96329_2002	Truro	Dec-91	3
Wakeby Pond (96346)	MA96346_2002	Mashpee/Sandwich	Sep-96	5
Walkers Pond (96331)	MA96331_2002	Brewster	Feb-02	5
Waquoit Bay (96912)	MA96-21_2002	From mouths of Seapit River, Quashnet River (also known as Moonakis River), and Great River to confluence with Vineyard Sound, Falmouth/Mashpee.	Nov-01	5
Wellfleet Harbor (96916)	MA96-34_2002	The waters north of an imaginary line drawn east from the southern tip of Jeremy Point, Wellfleet to Sunken Meadow, Eastham excluding the estuaries of Herring River, Duck Creek, Blackfish Creek, and Fresh Brook, Wellfleet.	Nov-01	5
Wequaquet Lake (96333)	MA96333_2002	Barnstable	Feb-02	5
West Bay (96927)	MA96-65_2002	south of the Bridge Street bridge to Nantucket Sound including Eel River, Barnstable.	May-03	5
<b>Charles</b>				
Alder Brook (7239475)	MA72-22_2002	Headwaters northwest of the Needham Reservoir, south of Penn Central railroad tracks, to confluence with Charles River, Needham.	Dec-98	5
Lake Archer (72002)	MA72002_2002	Wrentham	Oct-98	2
Beaver Brook (7240350)	MA72-12_2002	Outlet Beaver Pond north of Route 126 (Hartford Avenue) to confluence with Charles River, Bellington.	Nov-98	3
Beaver Brook (7239125)	MA72-28_2002	Headwaters, south of Route 2, Lexington through culverting to Charles River, Waltham.	Dec-98	5
Beaver Pond (72004)	MA72004_2002	Bellingham/Milford	Oct-98	3
Bogastow Brook (7239775)	MA72-16_2002	Outlet Factory Pond, Holliston to inlet South End Pond, Millis.	May-03	5
Box Pond (72008)	MA72008_2002	Bellingham/Mendon	Oct-98	5
Brookline Reservoir (72010)	MA72010_2002	Brookline	Dec-93	3
Bulloughs Pond (72011)	MA72011_2002	Newton	Dec-93	5
Cambridge Reservoir (72014)	MA72014_2002	Waltham/Lincoln/Lexington	Oct-98	2
Cambridge Reservoir Upper Basin (72156)	MA72-156_2002	Lincoln/Lexington	Oct-98	5
Cedar Swamp Pond (72016)	MA72016_2002	Milford	Oct-98	5
Chandler Pond (72017)	MA72017_2002	Boston	Dec-93	5
Charles River (7239050)	MA72-01_2002	Source, outlet Echo Lake, Hopkinton to Dilla Street, Milford. Miles 78.9-76.5	N/A	Nov-98

## Appendix 2

### Waterbody Segments and Integrated List Categories by Major Watershed

NAME	SEGMENT ID	DESCRIPTION	ASSESS DATE	CATEGORY
Charles River (7239050)	MA72-02_2002	Dilla Street, Milford to Milford WWTP, Hopedale. Miles 76.5-73.4	N/A	5

**STATEMENTS/CERTIFICATIONS REQUIRED BY THE NATIONAL  
ENVIRONMENTAL LABORATORY APPROVAL CONFERENCE (NELAC)**

New England Testing Laboratory is certified under the National Environmental Laboratory Approval Program (NELAP). This certification requires the following statements and certifications be included in our report.

This report shall not be reproduced, except in full, without written approval of the laboratory.

New England Testing certifies that the test results contained within this report meet all NELAC requirements except as detailed in the Case Narrative section of this report.

**SAMPLES SUBMITTED and REQUEST FOR ANALYSIS:**

The samples listed in Table I were submitted to New England Testing Laboratory on October 6, 2005. The group of samples appearing in this report was assigned an internal identification number (case number) for laboratory information management purposes. The client's designations for the individual samples, along with our case numbers, are used to identify the samples in this report. The case number for this sample submission is Q1006-21.

Custody records are included in this report.

**Site: ECI Framingham 846**

**TABLE I, Samples Submitted**

Sample ID	Date Sampled	Matrix	Analysis Requested
Bella Costa Influent	10/5/05	Water	Table II

**TABLE II, Analysis and Methods**

**ANALYSIS**

Total Petroleum Hydrocarbons

**DETERMINATIVE METHOD**

1664A

This method is documented in:

EPA-821-B-94-004

40 CFR 136, *Guidelines Establishing Test Procedures for the Analysis of Pollutants Under the Clean Water Act*, Office of Federal Register National Archives and Records Administration.

**CASE NARRATIVE:**

**Sample Receipt:**

No sample for ms/msd/duplicate analysis was supplied. No field blank was supplied. (This does not qualify the analytical results but does prevent conducting these SW-846 {Chapter 1, Section 3.4} QA Audits.)

The samples were all appropriately cooled and preserved upon receipt.

The samples were received in the appropriate containers.

The chain of custody was adequately completed and corresponded to the samples submitted.

**General Chemistry:**

TPH: No anomalies or excursions from QC limits

## Sample Results

Nickel	200.7
Selenium	3113B
Silver	3113B
Zinc	200.7

These methods are documented in:

*Standard Methods for the Examination of Water and Wastewater*, 18th Edition, 1992, APHA, AWWA-WPCF.

*Manual of Methods for Chemical Analysis of Water and Water Wastes*, EPA-600/4-79-020 (Revised 1983), USEPA/EMSL.

40 CFR 136, *Guidelines Establishing Test Procedures for the Analysis of Pollutants Under the Clean Water Act*, Office of Federal Register National Archives and Records Administration.

## **CASE NARRATIVE:**

### **Sample Receipt:**

No sample for ms/msd/duplicate analysis was supplied. No field blank was supplied.(This does not qualify the analytical results but does prevent conducting these SW-846 {Chapter 1, Section 3.4} QA Audits.)

The samples were all appropriately cooled and preserved upon receipt.

The samples were received in the appropriate containers.

The chain of custody was adequately completed and corresponded to the samples submitted.

### **Metals:**

All analyses were performed according to NETLAB's documented Standard Operating Procedures, within all required holding times, and with appropriate quality control measures.

A marginal concentration of Iron was detected in the water method blank. The concentration of Iron was at the reporting limit. This has no significance on the usefulness of the sample result, which was found to be considerably greater than the blank contamination.

### **PCBs:**

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria.

The ongoing calibration was within specifications. The surrogate associated with sample "Bella Costa Influent" was spiked at a level below detectable limits. As a result, the surrogate was not reported. There were no other anomalies or non-conformances encountered. We conclude that the data reliability is not compromised by the excursions.

### **General Chemistry:**

Total Suspended Solids: No anomalies or excursions from QC limits

Total Residual Chlorine: No anomalies or excursions from QC limits. Sample turbidity developed during analysis which can cause an interference. Therefore, a serial dilution was performed.

Hexavalent Chromium: No anomalies or excursions from QC limits

## Sample Results

Case No. Q1006-20

**Bella Costa Influent**

Parameter	Result, mg/l	Reporting Limit	Date Analyzed
Total Suspended Solids	19	1	10/7/05

**CHAIN OF CUSTODY RECORD**

October 19, 2005

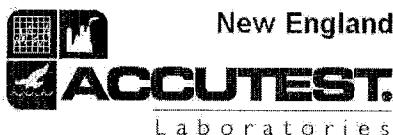

Michelle Smith  
NewFields Princeton LLC  
22 West Street  
Red Bank, NJ 07701

Dear Ms. Smith

As per your request, here is a brief note regarding analysis of metals based on methods SW846-6010B, and EPA 200.7. Both are acceptable methods using same technology (Inductively Coupled Plasma, ICP), instrumentation, and optimization techniques. Calibration standards and digested samples are matrix matched and internal standard is utilized for the analysis, and the results are generally compatible.

Sincerely,

Brad Madadian  
Laboratory Manager  
Accutest laboratories of New England

New England

**CHAIN OF CUSTODY ATTACHMENT - EPA NPDES RGP REQUIREMENTS****PART 1 of 2**

PARAMETER	METHOD	Minimum Levels and Test Methods ML <sup>a</sup>	Discharge Efficient Limit
-----------	--------	--	---------------------------

**LEGEND:**

RGP = Remediation General Permit  
 Flame AA = Flame Atomic Absorption  
 ICP = Inductively Coupled Plasma  
 Furnace AA = Furnace Atomic Absorption  
 FW = Freshwater  
 SW = Saltwater  
 MA = State of Massachusetts  
 NH = State of New Hampshire

**FOOTNOTES:**

1. Minimum level (ML) is the lowest level at which the analytical system gives a recognizable signal and acceptable calibration point for the analyte. The ML is calculated by multiplying the laboratory-determined method detection limit by 3.18 (see 40 CFR Part 136, Appendix B) Where a minimum level (ML) is listed but a test method is not specified, permittees may use any of the available methods approved for use under 40 CFR 136, including alternatives approved by this permit, that meets ML. See EPA's "Methods and Guidance for the Analysis of Water" at [www.epa.gov/water/twccatwg/nst](http://www.epa.gov/water/twccatwg/nst). Where a test method is specified but ML is not listed for that Method, the lowest ML for listed methods must be used before concentration can be considered as "not recoverable".
2. For measuring volatile organic compounds, Method 8260C (or the latest version) may be used as a substitute for CWA Methods 824.2, 602, 624, or 1624. Method 8260C must be preceded by Method 5030 as the preparation method. However, any method changes must be accompanied by 8260C. For TBA and TAME the EPA advises no acid as a preservative.
3. For measuring semi-volatile organic compounds, Method 827.0D may be used as a substitute for Methods 610, 625, or 1625. Method 827.0D must be preceded by Method 3520C as the sample preparation method. In either case, the quality control requirements of Method 3500B must be taken into account. The sample preparation method must be specified with data analysis records. Method 827.0D may be modified to provide lower detection and quantitation limits using Selected Ion Monitoring (SIM). Any method changes must be accompanied by documented quality assurance quality control (QA/QC) test results to prove that the analytical process can achieve the lower detection limits of Method 827.0D.
4. GC - gas chromatography.
5. GC/MS - gas chromatography/ mass spectrometry
6. LC/high pressure liquid chromatography.
7. Flame Atomic Absorption.
8. For measuring fuel oxygenates, Method 602 must be modified to include a heated purge.
9. The sum of individual biphenyl compounds.
10. In the November 2002 WQC, EPA has revised the definition of total PCBs for aquatic life as "Total PCBs is the sum of all homologues, all isomer, all congener, or all Aroclor analyses.
11. Method 1686a (HRGC/IRMS) has been proposed by EPA and is currently being validated. When approval of the method is finalized, it will be approved for use with this general permit.
12. Methods 3010b and 200.7 for metals may only be used when sample prepared with SW-846 digestion method, Method 3010.
13. Any value below the ML shall be reported as zero.
14. Analysis of the influent samples shall use the test methods with the MLs at or below limits where practicable.

PARAMETER	METHOD	Minimum Levels and Test Methods ML*	Discharge Effluent Limit
-----------	--------	--	--------------------------

**LEGEND:**

RGP = Remediation General Permit  
 Flame AA = Flame Atomic Absorption  
 ICP = Inductively Coupled Plasma  
 Furnace AA = Furnace Atomic Absorption  
 FW = Freshwater  
 SW = Saltwater  
 MA = State of Massachusetts  
 NH = State of New Hampshire

**FOOTNOTES:**

1. Minimum Level (ML) is the lowest level at which the analytical system gives a recognizable signal and acceptable calibration point for the analysis. The ML represents the lowest concentration at which an analyte can be measured with a known level of confidence. The ML is calculated by multiplying the laboratory-determined method detection limits by 3.18 (see 40 CFR Part 136, Appendix B). Where a minimum level (ML) is listed but a test method is not specified, permittees may use any of the available methods approved for use under 40 CFR 136, including alternatives approved by this permit, that meets ML. See EPA's "Methods and Guidance for the Analysis of Water" at [www.epa.gov/water/cwcatalog.htm](http://www.epa.gov/water/cwcatalog.htm). Where a test method is specified but ML is not listed for that Method, the lowest ML for listed methods must be used before concentration can be considered as "non-detect".
2. For measuring volatile organic compounds, Method 8280C (or the latest version) may be used as a substitute for CWA Methods 5242, 602, 624, or 1824. Method 8280C must be preceded by Method 5030 as the preparation method. However, any method changes must be accompanied by documented quality assurance quality control (QA/QC) test to prove that the analytical process can achieve the lower detection limits of Method 8280C.
3. For measuring semi-volatile organic compounds, Method 8270D may be used as a substitute for Methods 610, 625, or 1626. Method 8270D must be preceded by Method 3500C as the sample preparation method. In either case, the quality control requirements of Method 3500B must be taken into account. The sample preparation method must be specified with data analysis records. Method 8270D may be modified to provide lower detection and quantitation limits using Selected Ion Monitoring (SIM). Any method changes must be accompanied by documented quality assurance quality control (QA/QC) test results to prove that the analytical process can achieve the lower detection limits of Method 8270D.
4. GC - gas chromatography.
5. GC/MS - gas chromatography/mass spectrometry.
6. LC-HPLC - high pressure liquid chromatography.
7. Flame Atomic Absorption.
8. For measuring total oxygenates, Method 562 must be modified to include a heated purge.
9. The sum of individual phthalate compounds.
10. In the November 2002 WQC, EPA has revised the definition of total PCBs as "total PCBs is the sum of all homologue, all isomer, all congener, or all Aroclor analyses.
11. Method 6688A (HRGC/HRMS) has been proposed by EPA and is currently being validated. When approval of the method is finalized, it will be approved for use with this General Permit.
12. Methods 6010b and 200.7 for metals may only be used when sample prepared with SW-846 digestion method, Method 3010.
13. Any value below the ML shall be reported as zero.
14. Analysis of the influent samples shall use the test methods with the MLs at or below limits where practicable.

3.1

**M51582: Chain of Custody**  
**Page 2 of 9**

**CHAIN OF CUSTODY ATTACHMENT - EPA NPDES RGP REQUIREMENTS****PART 1 of 2**

PARAMETER	METHOD	Minimum Levels and Test Methods		Discharge Effluent Limit
		ML	ML*	

**LEGEND:**

RGP = Remediation General Permit  
 Flame AA = Flame Atomic Absorption  
 ICP = Inductively Coupled Plasma  
 Furnace AA = Furnace Atomic Absorption  
 FW = Freshwater  
 SW = Saltwater  
 MA = State of Massachusetts  
 NH = State of New Hampshire

**FOOTNOTES:**

1. Minimum Level (ML) is the lowest level at which the analytical system gives a recognizable signal and acceptable calibration point for the analysis. The ML is calculated by multiplying the laboratory-determined method detection limit by 3.18 (see 40 CFR Part 136, Appendix B) Where a minimum level (ML\*) is listed but a test method is not specified, permittees may use any of the available methods approved for use under 40 CFR 136, including alternatives approved by this permit, that meets ML\*. See EPA's "Methods and Guidance for the Analysis of Water" at [www.epa.gov/water/cwcatalogs/rst](http://www.epa.gov/water/cwcatalogs/rst). Where a test method is specified but ML is not listed for that Method, the lowest ML for listed methods must be used before concentration can be considered as "non-detect".
2. For measuring volatile organic compounds, Method 8260C (or the latest version) may be used as a substitute for CWA Methods 524.2, 602, 624, or 1624. Method 8260C must be preceded by Method 5030 as the preparation method. However any method changes must be accompanied by documented quality assurance quality control (QA/QC) test to prove that the analytical process can achieve the lower detection limits of Method 8260C.
3. For measuring semi-volatile organic compounds, Method 8270D may be used as a substitute for Methods 610, 625, or 1625. Method 8270D must be preceded by Method 3520C as the sample preparation method. In either case, the quality control requirements of Method 3500B must be taken into account. The sample preparation method must be specified with data analysis records. Method 8270D may be modified to provide lower detection and quantitation limits using Selected Ion Monitoring (SIM). Any method changes must be accompanied by documented quality assurance quality control (QA/QC) test results to prove that the analytical process can achieve the lower detection limits of Method 8270D.
4. GC - gas chromatography.
5. GC/MS - Gas chromatography/mass spectrometry
6. LC-high pressure liquid chromatography
7. Flame Atomic Absorption.
8. For measuring fuel oxygenates, Method 602 must be modified to include a heated purge.
9. The sum of individual polychlorinated compounds.
10. In the November 2002 WQC, EPA has revised the definition of total PCBs as "total PCBs is the sum of all homologues, all isomers, all congeners, or all Arodon analyses.
11. Method 1668a (HPLC/HRMS) has been proposed by EPA and is currently being validated. When approval of the method is finalized, it will be approved for use with this general permit.
12. Methods 6010b and 200.7 for metals may only be used when sample prepared with SVN-846 digestion method, Method 3010.
13. Any value below the ML shall be reported as zero.
14. Analysis of the influent samples shall use the test methods with the MLs at or below limits where practicable.

Part 2 of 2 - Page 5 of 6

**CHAIN OF CUSTODY ATTACHMENT - EPA NPDES RGP REQUIREMENTS**  
**PART 2 of 2 (ACCUTEST)**

PARAMETER	METHOD	Minimum Levels and Test Methods	ML	Discharge Effluent Limit

**LEGEND:**

RGP = Remediation General Permit  
 Flame AA = Flame Atomic Absorption  
 ICP = Inductively Coupled Plasma  
 Furnace AA = Furnace Atomic Absorption  
 FW = Freshwater  
 SW = Saltwater  
 MA = State of Massachusetts  
 NH = State of New Hampshire

**FOOTNOTES:**

1. Minimum level (ML) is the lowest level at which the analytical system gives a recognizable signal and acceptable calibration point for the analyte. The ML represents the lowest concentration at which an analyte can be measured with a known level of confidence. The ML is calculated by multiplying the laboratory-determined method detection limit by 3.13 (see 40 CFR Part 136, Appendix B) where a minimum level (ML) is listed but a test method is not specified. Permittees may use any of the available methods approved for use under 40 CFR 136, including alternatives approved by this permit, that meets ML. See EPA's "Methods and Guidelines for the Analysis of Water" at [www.epa.gov/owrcatdg/nf](http://www.epa.gov/owrcatdg/nf). Where a test method is specified but the ML is not listed for that Method, the lowest ML for listed methods must be used before concentration can be considered as non-hazardous.
2. For measuring volatile organic compounds, Method 8280C (or the latest version) may be used as a substitute for CWA Methods 524.2, 602, 624, or 1624. Method 8280C must be preceded by Method 5030 as the preparation method. However, any method changes must be accompanied by documented quality assurance, quality control (QA/QC) test to prove that the analytical process can achieve the lower detection limits of Method 8280C. For TBA and TAME, the EPA advises no acid as a preservative.
3. For measuring semi-volatile organic compounds, Method 8270D may be used as a substitute for Methods 610, 625, or 1625. Method 8270D must be preceded by Method 3520C, as the sample preparation method. In either case, the quality control (QC) test must be taken into account. The sample preparation method must be specified with data analysis records. Method 8270D may be modified to provide lower detection and quantitation limits using Selected Ion Monitoring (SIM). Any method changes must be accompanied by documented quality assurance, quality control (QA/QC) test results to prove that the analytical process can achieve the lower detection limits of Method 8270D.
4. GC - gas chromatography.
5. GCMS - gas chromatography/mass spectrometry
6. LC-high pressure liquid chromatography
7. Flame Atomic Absorption
8. For measuring fuel oxygenates, Method 602 must be modified to include a heated purge.
9. The sum of individual phthalate compounds.
10. In the November 2002 WCC, EPA has revised the definition of total PCBs for aquatic life as "total PCBs is the sum of all homologues, all isomer, all congener, or all Aroclor analyses.
11. Method 1658a (HRGC/IRMS) has been proposed by EPA and is currently being validated. When approval of the method is finalized, it will be approved for use with this general permit
12. Methods 6010b and 230.7 for metals may only be used when sample prepared with SW-846 digestion method, Method 3010.
13. Any value below the ML shall be reported as zero.
14. Analysis of the influent samples shall use the test methods with the MLs at or below limits where practicable.
